+1 613-227-7666 | justin.elchibani@outlook.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

Fourth-year Software Engineering student seeking a 4-16 month internship. Experienced in software development, AI, quality assurance, and test automation engineering, through co-op placements, coursework, as well as personal projects. Skilled in JavaScript, Python, React, SQL, modern software engineering practices, object-oriented programming, databases, quality assurance concepts, scripting, UI/UX design, and data structures & algorithms.

EDUCATION

University of Ottawa

Bachelor of Applied Science in Software Engineering, Minor in Mathematics

Major CGPA: 3.74/4.0 (OUAC Scale)

Sep. 2023 – Dec. 2027

Ottawa, ON

EXPERIENCE

Incoming Data Engineering Intern

Innovation, Science and Economic Development Canada

Jan. 2027 – Apr. 2027

Software Automation Engineering Intern

Innovation, Science and Economic Development Canada

Apr. 2026 – Present

- Develop and maintain a **Playwright** based test automation framework using **JavaScript** and **Node.js** for smoke, regression, and end-to-end testing of enterprise web application workflows
- Design and implement reusable Playwright test scripts, utilities, and page level actions, contributing to a growing suite of **automated tests**
- Debug automated test failures, investigate and reproduce software defects, and identify regressions introduced during ongoing development to help validate application functionality

Quality Assurance Analyst

Global Affairs Canada

Jan. 2025 – Apr. 2025

- Conducted Quality Assurance Testing, including regression, validation and manual testing, to ensure software and hardware builds met the highest standards of functionality and security
- Automated testing processes using **PowerShell scripting**, reducing manual testing time by ~40%
- Identified and resolved technical issues through effective problem-solving and troubleshooting, contributing to system reliability and quality improvements

Software Developer

Wouessi Digital

Feb. 2025 – Apr. 2025

- Contributed to the development of an Employee Management System (EMS)
- Developed and maintained the frontend using **React.js** and **CSS**, managing global application state with React's **Context API** to create a responsive and user-friendly interface
- Collaborated with the team in an agile environment, developing reusable React components, implementing new features, debugging issues, and improving performance

PROJECTS

TalkBlock - Hack the North 2026 | *React Native, Expo, Python, Node.js, OpenAI API, Twilio* Waterloo, ON

- Built a cross platform mobile app in 36 hours using **React Native** and **Expo**, developing frontend screens for live listening, alerts, call preferences, and persistent user settings
- Implemented Android background speech recognition with a **custom Kotlin module** and **GPT-5-mini API** for real time semantic conversation detection using rolling transcript windows and user dynamic keyword triggers
- Developed an **Express.js** backend to securely process live conversational transcripts through **OpenAI** and trigger **Twilio** phone calls, with rate limiting and API key management

Church Website – Full Stack Developer | *HTML, CSS, TypeScript, PostgreSQL*

Mar. 2026 – Present

- Volunteered as a **Developer** to rebuild my church's outdated website, improving **UI/UX** through responsive layouts, consistent spacing/typography, and simplified navigation
- Developed responsive front-end pages using **HTML**, **CSS**, and **TypeScript**, keeping navigation and content layouts clear and consistent
- Built and integrated a **Supabase SQL/Postgres** events database using API-based data operations, allowing non-technical staff to update event content with minimal effort
- Deployed a live **demo** and collected feedback from members to iterate on the UI/UX; public production deployment is pending DNS transfer from the previous website team

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML, CSS, C, PowerShell, SQL, French, English

Frameworks: React.js, Expo, Node.js, Playwright, Bootstrap, FastAPI, PyAutoGUI, OpenCV, Angular

Developer Tools: Git, GitHub, Vercel, Supabase, PostgreSQL, Linux, Windows, macOS, Visual Studio Code, Eclipse, Firebase, PowerShell ISE, PowerShell Scripting, Jenkins (CI/CD), BitBucket, Jira
